# Envoy.

## The Paperless Portable vs. Portable Paper.

The Paperless Portable is a sleek 26 pound CRT terminal. It looks and acts like an engineer's fondest day dream, but it's as real as the tip of your nose.

Until now, man has been content with 'portable paper.' He put a noisy 100 pound teleprinter on wheels and carried a box of paper around and called it portable.

Or he used a portable thermal printer. It too demanded reams of paper, and it still weighed almost 40 pounds. At the end of your arm, portable was a euphemism for heavy.

The Paperless Portable is Envoy. It comes in two models, the 620 and the 680. Both have built in acoustic couplers, full cursor controls and display 24 lines with 80 characters per line. The 680 also has formatting, graphics, an edit sub-mode for programmers and video output display

capability for group presentations.

Unlike the two mechanical contraptions described above, Envoy is reliable. Its solid state electronics can't get out of alignment. And the only noise you'll hear is the faint hum of progress.

Now, as the name implies, the Envoy is paperless. If paper is essential to your operation, you'll have to make do with teleprinters.

But if you're using paper just because you're used to it; or because you like the 'security' of paper, you owe it to yourself to consider Envoy.

The Paperless Portable.

It's better than heavy.

And at \$2250 for the 620 and \$2995 for the 680, it's better than paper.
